

What Is Claimed Is:

1. A method for editing a digital broadcasting material, the method comprising the steps of:

clipping segments from the digital broadcasting material consisting of program segments and being recorded in a recording medium in a stream type;

recording the clipped segments as new programs, respectively; and

selecting some of the recorded programs, and merging the selected programs into a new program,

wherein the step for clipping the segments comprises the steps of:

reproducing the digital broadcasting material; and

selecting a predetermined period of the digital broadcasting material, by designating a start point and an end point thereof.

2. The method of claim 1, wherein the digital broadcasting material is provided in a multiple number.

3. The method of claim 1, wherein the full streams of the digital broadcasting material are reproduced.

4. The method of claim 1, wherein the digital broadcasting material is reproduced at intervals of a predetermined length.

5. The method of claim 1, wherein a representative screen of the digital broadcasting material is reproduced.

6. The method of claim 1, wherein the step for selecting some of the recorded programs, and merging the selected programs into the new program comprises a step for designating an order of the selected programs.

7. The method of claim 1, wherein the step for selecting some of the recorded programs, and merging the selected programs into the new program comprises a step for

recording a screen relating to the merged program.

8. A method for editing a program in a personal video recording system, the method comprising the steps of:

- 5 reproducing a program recorded by the user;
 clipping a predetermined period of the reproduced program, by selecting a start point and an end point; and
 recording the respective clipped segments.

10 9. The method of claim 8, wherein the recorded program is a broadcasting program recorded in a hard disk.

15 10. The method of claim 8, wherein the recorded and reproduced program is a multi-channel program.

 11. The method of claim 8, wherein the full streams of the digital broadcasting material are reproduced.

20 12. The method of claim 9, wherein the digital broadcasting material is reproduced at intervals of a predetermined length.

 13. The method of claim 8, wherein a representative screen of the digital broadcasting material is reproduced.

25 14. A method for editing a program in a personal video recording system, comprising the steps of:

- reproducing a recorded program;
 clipping predetermined streams from the reproduced program, by selecting a start point and an end point;
30 merging the clipped streams; and
 recording the merged streams as a new program.

15. The method of claim 14, wherein the step for merging the clipped streams designates an order of the clipped streams, and merges the streams in the designated order.

5 16. The method of claim 14, wherein the step for merging the clipped streams merges a representative screen of the clipped streams.

17. The method of claim 14, wherein the full streams of the recorded program are reproduced.

10

18. The method of claim 14, wherein the recorded program is reproduced at intervals of a predetermined length.

15

19. The method of claim 14, wherein a representative screen of the recorded program is reproduced.

20. The method of claim 14, wherein the reproduced program is a multi-channel program.
